General canvas that a user starts out with

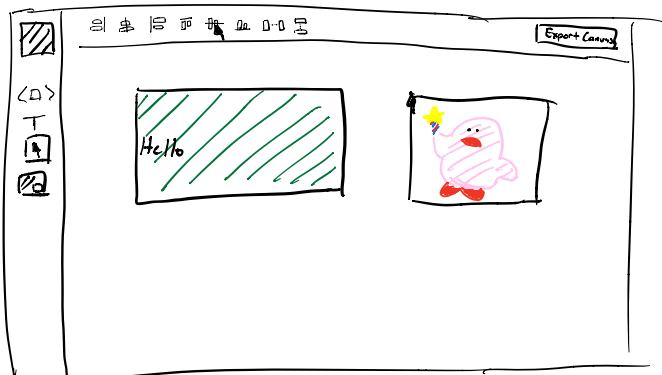

Users can draw rectangles of different heights and widths of a selected color

Users can also enter text to be freely positioned on the canvas, also of a specified color

images can also be imported and freely positioned within the canvas, such as "kirb.png"

With the cursor tool, multiple objects can be selected and manipulated— moved, deleted, or realigned/distributed.

with the export canvas button, the program will generate HTML and CSS based on what the canvas looks like
